Ripley Engineering (UK) Ltd

Ripley Engineering has a proud tradition of engineering and operational excellence stretching right back to 1962. Our mission is simple: to always exceed the expectations of our customers by providing the very best quality of goods and services.

Our capacious Basingstoke based factories house a large array of modern, efficient and expertly run production machinery. Combined with highly skilled and experienced engineers and operators, this allows us to offer both a top quality manufacturing service, and invaluable technical assistance. Our wealth of experience extends to areas including vending machine cabinets, medical and biological control cabinets, microwave chassis, equipment racks and panels, electrical/electronic equipment enclosures, and a wide range of general sheet metal components and fabrications.

Our in-house processes include laser cutting, punch pressing, skilled & robotic bending, skilled & robotic spot welding, arc welding, inserting, cleaning and graining, powder coating and electro-mechanical assembly.

We operate a capacious, self-contained and high quality surface coating facility that can be used by our customers as a service in its own right, or as part of our extensive sheet metal fabrication service. Our portfolio now also includes a recently introduced fast-track laser cutting service, allowing customers to take

special advantage of our renowned Radan system and three modern and efficient laser cutting machines.

The company operates a quality system based on ISO9001:2008. We always warmly welcome visits from prospective and existing customers.
